

Co-operative European
System for Advanced
information Redistribution

Collaborative Platform for Combined Transport

Supported by operators

CESAR Information Services – CIS

The IT-Service company CIS SCRL - CESAR Information Services, based in Brussels, provides a European wide harmonized interface between Combined Transport operators and their customers. CIS ensures the functioning of the CESAR system, coordinates the integration of further operators and is responsible for the set up of functionalities for trans-European communication with the customers and amongst the operators.

What is the principal of CESAR?

CESAR stands for "Co-operative European System for Advanced Information Redistribution" between Combined Transport operators and their customers. As a single access point on the Internet for status information, CESAR provides you with the most up-to-date information on your loading units. This system is the first of its kind at international level. The different operators all come as one virtual company with one single address where you can obtain status information about your loading unit no matter its position.

What are the advantages of CESAR? How can you be part of it?

A powerful tool for the most up-to-date information

- booked
- delivered in departure terminal
- loaded on wagon
- departed from departure terminal
- foreseen arrival at destination terminal
- ready for pick-up in arrival terminal
- pick-up completed in arrival terminal
- arrived for gateway in intermediary terminal

With CESAR the status information is available as soon as the loading unit leaves the truck and is carried on rail in "unaccompanied" transport.

Find out the current status of all your loading units with the tracking and tracing functions

Once you are logged in and selected your language (English, French, German or Italian), you can retrieve information through queries, such as:

- Query by Customer Reference Number
- Query by Loading Unit
- Query by Terminal
- Query by Train

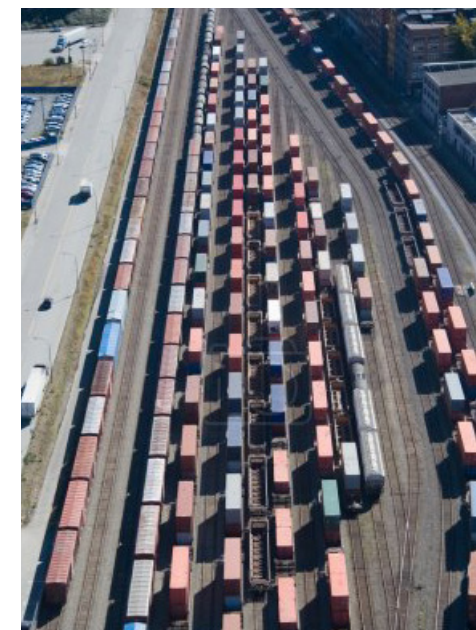

You will find the information about all your loading units no matter which CESAR operator is handling them. Besides the information on goods, Customs Seals, a historical list of the transport status is available and in case of a gateway, you can navigate between different legs of the transport.

Find out about irregularities in case of incidents during the transport

In case of irregularities your operator will inform you by email or fax. Further information and updates are available when you log in to CESAR. The information provided by the operational departments of the operators, based on all available sources (information from railways, own agents, satellite controls ...).

Timetable and on-line booking – Link to Operator

Select one operator and then enter the individual operator-booking and timetable interface. Important notice: that these systems are specific to each operator. You can get in touch with one of the CESAR operators for further information.

Integration of CESAR information into your in-house EDI system – B 2 B – Interface

CESAR offers interfaces for an easy integration into the customers own EDI systems. The data may be downloaded in an XML format for automatic or further manual processing.

General access to CESAR

CESAR is accessible with any web browser at

<http://www.cesar-online.com>

The website's public section contains general information about the company and the system. It includes a demo version explaining the different functions, queries and answer-screens.

Customer access to CESAR

If you are a customer of an intermodal operator and want to use the system, please contact your CESAR operator for additional information and to obtain a secured access, where your confidential data will be protected.
